- 1. A ballistic protection apparatus comprising:
- a garment made of ballistic material including a peripheral edge and configured to be received on the body of a person; and
- a reinforcing member secured proximate to the peripheral edge of the garment and configured to provide roll protection to the peripheral edge of the garment in response to impact from a projectile.
- 2. The apparatus of claim 1, wherein the reinforcing member has a stiffness greater than a stiffness of the garment.
- 3. The apparatus of claim 2, wherein the reinforcing member comprises a reinforcing cord extending substantially continuously along the peripheral edge.
- 4. The apparatus of claim 2, wherein the reinforcing member has a modulus of elasticity greater than a modulus of elasticity of the garment.
- 5. The apparatus of claim 2, wherein the thickness of the reinforcing member is greater than the thickness of the garment.
- 6. The apparatus of claim 1, wherein the garment comprises one of a ballistic belt and a ballistic vest.
- 7. The apparatus of claim 1, further comprising an outer cover substantially surrounding the garment and the reinforcing member.
- 8. The apparatus of claim 1, wherein the garment is formed of polyparaphenylene terephthalamide.
- 9. A ballistic article comprising: a flexible armor member including a peripheral edge; and a reinforcing member located proximate the peripheral edge and configured to provide roll protection to the peripheral edge of the flexible armor member in response to impact from a projectile.
- 10. The ballistic article of claim 9, wherein the flexible armor member is one of a vehicle armor, a vessel armor, an aircraft armor, a ballistic shield, a ballistic garment, and an explosive blast mat.
- 11. The ballistic article of claim 9, wherein the reinforcing member comprises a body having a stiffness greater than a stiffness of the armor member.

- 12. The ballistic article of claim 11, wherein the reinforcing member comprises a reinforcing cord extending substantially continuously along the peripheral edge.
- 13. The ballistic article of claim 11, wherein the reinforcing member has a modulus of elasticity greater than a modulus of elasticity of the armor member.
- 14. The ballistic article of claim 11, wherein the thickness of the reinforcing member is greater than the thickness of the armor member.
- 15. A ballistic belt comprising: a central portion of ballistic material having a first stiffness; and upper and lower edge portions of ballistic material having a second stiffness and coupled to the central portion, the second stiffness being greater than the first stiffness.
- 16. The ballistic belt of claim 15, wherein the upper and lower edge portions each comprises a body secured to the central portion.
- 17. The ballistic belt of claim 15, wherein the upper and lower edge portions each have a modulus of elasticity greater than a modulus of elasticity of the central portion.
- 18. The ballistic belt of claim 15, wherein the thickness of each of the upper and lower edge portions is greater than the thickness of the central portion.
- 19. The ballistic belt of claim 15, further comprising a protective cover substantially surrounding the central portion and the upper and lower edge portions.
- 20. The ballistic belt of claim 15, further comprising a releasable fastener supported by the central portion and configured to operably couple with a garment to releasably secure the ballistic belt to a garment.
- 21. A ballistic belt comprising:

 a central portion of ballistic material;

 upper and lower edge portions coupled to the central portion; and
 an outer cover substantially surrounding the central portion and the
 upper and lower edge portions.
- 22. The ballistic belt of claim 21, wherein the outer cover defines a seam on a rear side of the ballistic belt.

- 23. The ballistic belt of claim 21, further comprising a releasable fastener supported by the outer cover and configured to operably couple with a garment to releasably secure the ballistic belt to the garment.
- 24. The ballistic belt of claim 21, wherein the central portion has a first stiffness, and the upper and lower edge portions have a second stiffness, the second stiffness being greater than the first stiffness.
